

One Universal Access Card

-  **Buildings**
-  **Computers**
-  **Mobility**
-  **Government trusted**

Today's healthcare organizations have a dilemma – how to enable medical staff to be more efficient while providing better care, meet increased regulations and maintain privacy with their patients and partners. Traditionally, these objectives have been at odds with one another, but recent innovation and standards adopted by the U.S. Government to establish trust and interoperability now make it possible.

INTRODUCING idOnDemand

idOnDemand offers a universal credential for secure access to all healthcare provider resources, network and building access points, without having to replace current systems.

In contrast to point solutions, idOnDemand works with a broad range of existing systems to consolidate access for care providers, improving user experience. Based on recognized standards, idOnDemand serves as a platform that is compatible with future initiatives while not having to reinvest in new solutions. It is easy to implement and customers only pay for what is being used, without up-front costs - typically for the same cost as current programs.

IMPROVE SECURITY

Healthcare organizations are under unprecedented scrutiny to protect patient records, regardless of whether they are electronic or paper. Most healthcare organizations employ separate technologies to address this issue, yet still have large vulnerabilities that are easily exploited or undermine compliance.

idOnDemand uses government-grade security that exceeds current compliance mandates, in turn influencing future regulation specifications to utilize this framework.

DO MORE WITH LESS

idOnDemand is delivered securely as a managed service with significant savings in capital and ongoing management.

idOnDemand allows your organization to manage the entire lifecycle of an idOnDemand SmartID from physical production, programming and delivery to the end-user. Help desk costs are reduced by eliminating calls to reset forgotten passwords and lost cards.

IMPROVE USER SATISFACTION

End-user satisfaction and security are both dramatically improved by eliminating the need to carry multiple tokens, ID cards or remembering multiple passwords.

INDUSTRY COMPLIANCE

idOnDemand is U.S. Government PIV compliant, supporting your organization's compliance with all federal mandates such as Health Insurance Portability and Accountability Act (HIPAA) and Health Information Technology for Economic and Clinical Health (HITECH).

SECURE AND CONVENIENT ACCESS

Electronic health records

Securely access electronic health information about individual patients.

e-Prescriptions

Doctors can comply with the Drug Enforcement Administration (DEA) regulations to additionally prescribe controlled substances.

Kiosk terminals

Clinicians can use the same idOnDemand SmartID they used to enter the building with a simple touch and secure login to healthcare applications.

Clinical applications

Securely access all clinical applications.
